

Gemini CLI One-Click Kit (for Beginners)

 [한국어](#) | English

A **beginner-friendly tool** that lets you use Google's AI **Gemini** right on your Windows PC through a terminal (the black window). No complicated setup — just **double-click one file and press a number key**.

 This Kit is an **unofficial helper launcher** that makes Google's official tool `@google/gemini-cli` easier to install and use. Gemini AI itself is built and operated by Google. This Kit is not affiliated with or endorsed by Google.

 **As of June 18, 2026, the "Login with Google" free method was discontinued.** You now use a **free "API key"** (this document shows how to get one); paste it once and you're set.

Quick Start (4 steps, about 5–10 minutes)

1. **Download:** place `Gemini-CLI_One-Click_Kit.bat` in a folder on your PC.
2. **Install:** double-click it → choose **[1] Install** in the menu.
3. **Set API key:** choose **[2] Set API key** → paste a free key. (How to create one is in step 4 below.)
4. **Run:** choose **[3] Run** → type your question in Korean or English. Done.

Each number key works with a **single press** — you do not need to press Enter.

1. Prerequisites / Required Programs

Item	Description	Cost
Windows 10 or 11	The operating system this Kit runs on	-

Item	Description	Cost
Internet connection	Needed to install and chat	-
Node.js	The "engine" program Gemini runs on. Menu [1] Install sets it up automatically.	Free
Gemini API key	The key to use the free AI. Set it once in menu [2].	Free (no credit card)

- If automatic Node.js install fails, the Kit shows the download link (<https://nodejs.org> → the **LTS** button on the left).

2. How to Download

- You only need the single file `Gemini-CLI_One-Click_Kit.bat`.
- The included documents (README, GUIDE, LICENSE, NOTICE) are for reference and are not required to run.
- Put the file in an easy-to-find folder such as your **Desktop** or **Documents**.

💡 If a blue warning ("Windows protected your PC") appears when you double-click, see **5 / 9. Troubleshooting**. It is a normal warning, not a virus.

3. How to Install (Menu 1)

1. **Double-click** `Gemini-CLI_One-Click_Kit.bat`.
2. When the menu appears in the black window, press **[1]**.
3. If Node.js is missing, it asks "Install automatically?" → press **Y**.
4. When "Install complete!" appears, you're done (usually 30s–1min).

If Node.js was just auto-installed, **close the window and re-open it** (double-click again), then press [1] once more (to refresh the path).

4. Set API Key (Menu 2) — once only

Why? Since 2026-06-18 the free "Login with Google" method is blocked. Use a free **API key** instead. Enter it once and the Kit remembers it.

Create a free key (no credit card)

1. In a browser, go to  <https://aistudio.google.com/apikey> → sign in with Google
2. Click **[Create API key]**
3. Click **Copy** next to the created key (it usually starts with `AIza...`)

Enter it into the Kit

1. In the Kit menu, choose **[2] Set API key**
2. When prompted, **right-click to paste** the copied key, then press **Enter**
3. When "Saved!" appears, you're done. Menu **[3] Run** / **[4] One-line question** now work.

 **Your key is like a password.** Never show it to others or paste it in chats/forums. The Kit stores the key in this PC's user environment variable `GEMINI_API_KEY` (it is not sent over the internet). To delete the key, use **[8] Remove** → **"Also delete API key"**.

5. How to Run (Menu 3) & How to Use

1. In the Kit menu, choose **[3] Run**.
2. If asked **"Do you trust this directory?"** the first time → choose **Trust / Yes**.
3. When the chat opens, just type **in plain language** — no commands to memorize.
 - e.g. `What should I have for lunch?` / `Write a polite apology email` / `Write Python code for a multiplication table`
4. To end the chat, type `/quit` or press **Ctrl+C twice**.

One-line question (Menu 4): ask a single question and get an answer without entering the chat window.

6. How It Works (what the Kit does)

This Kit is a **helper launcher that types the complicated commands for you**.

```
[You] press a number key
|
▼
[Kit (.bat)] runs the right command for you
|   - Install:  npm install -g @google/gemini-cli
|   - Set key:  saves env var GEMINI_API_KEY
|   - Run:      gemini (chat) / gemini -p "question" (one-line)
```

▼
[Gemini CLI] → internet → [Google Gemini AI] → answer

So the Kit just shows friendly screens and types commands for you; the **actual AI work happens on Google's servers**.

7. Full Menu

A **single key press** moves you instantly. No Enter needed. 💡 The Kit shows "**what to press now**" at the top, based on your current state — just follow it.

No.	Function	Description
1	Install ★	Installs Gemini on your PC (first time)
2	Set API key ★	Saves your free key once
3	Run ★	Starts a chat with the AI
4	One-line question	A single quick question without the chat
5	How to use	Walkthrough + examples/commands
6	Self-diagnosis	Checks setup / finds problems (saves a result file)
7	Update	Updates to the latest version
8	Remove	Cleanly uninstalls (optionally deletes key/config)
0	Exit	Closes the window

★ = the steps a first-time user presses in order.

8. Command Reference

Inside the chat (during Menu 3 Run) | Command | Meaning | |---|---| | `/help` | Show help | | `/clear` | Clear the screen (or Ctrl+L) | | `/quit` | End the chat (or Ctrl+C twice) |

Typed commands (for reference, if you use it without the Kit) | Command | Meaning | |---|---| | `npm install -g @google/gemini-cli` | Install | | `npm install -g @google/gemini-cli@latest` | Update | | `npm uninstall -g @google/gemini-cli` | Remove | | `gemini` | Start a chat | | `gemini --skip-trust -p "question"` | One-line question |

9. Troubleshooting / Error Handling

First: press Menu [6] Self-diagnosis. It shows what's wrong at a glance and also saves `gemini_jindan.txt` (the diagnosis result) in the Kit folder.

Symptom	What to do
Blue "Windows protected your PC" warning	[More info] → [Run anyway] . (Or right-click the file → [Properties] → check [Unblock] at the bottom → [OK], then double-click again.) It's a normal warning for files from the internet.
"Node.js not found"	[1] Install sets it up automatically. If not, install LTS from https://nodejs.org and re-open the window.
Install failed	Check your internet, then press [1] Install again.
"Command not found" / just installed but not working	Close the window and double-click again (to refresh the path).
Says no key when running	Do [2] Set API key first. If you just set it in another window, close and re-open.
"trusted directory" prompt	In chat mode choose Trust / Yes . The one-line question handles it automatically.
No answer / error	Check the key was copied correctly, then re-enter it in [2] .

10. Workflow (the whole flow)

Download → [1] Install → [2] Set API key → [3] Run → ask in plain language → answer
↳ [4] One-line question (quick, once)
If something breaks → [6] Self-diagnosis
When a new version is out → [7] Update
When you're done → [8] Remove

11. File Locations / Document Locations

Inside the Kit folder: | File | Contents | |---|---| | `Gemini-CLI_One-Click_Kit.bat` | **The program** (double-click only this) | | `README.md` / `README_EN.md` | Quick guide (this document) | | `GUIDE_한국어.md` / `GUIDE_English.md` | More detailed walkthrough | | `*.pdf` | PDF versions of the documents (identical

content) | | `LICENSE` | Full license (Apache-2.0) | | `NOTICE` | Copyright, trademark, disclaimer, service notice | | `gemini_cli.log` | A record of what the Kit did | | `gemini_jindan.txt` | Self-diagnosis result |

On your PC:

- Config folder: `C:\Users\(\yourname)\.gemini`
 - Saved API key: user environment variable `GEMINI_API_KEY`
-

12. How to Remove (Menu 8)

Pressing **[8] Remove** asks in order:

1. Whether to uninstall the program (Gemini)
2. Whether to also delete the saved **API key** (`GEMINI_API_KEY`)
3. Whether to also delete the config folder (`~/.gemini`)

To remove manually: `npm uninstall -g @google/gemini-cli`

13. Free Limits & Data Caution

- Free limits are **set by Google and may change**. Check the exact limits at <https://aistudio.google.com>.
 -  **On the free tier, your input may be used to improve Google's AI. Do not enter personal information, company secrets, or sensitive data.**
-

14. License · Copyright · Commercial Use

- **This Kit** (launcher and docs): **Apache License 2.0** © 2026 SoDam AI Studio — commercial use, modification, and redistribution allowed. Full text in the `LICENSE` file.
 - **Gemini CLI** (`@google/gemini-cli`): Apache-2.0 © Google LLC. The Kit does not bundle/redistribute it; it only helps you get it from the official source.
 - **Trademarks**: "Google", "Gemini", etc. are trademarks of Google LLC. This Kit is **unofficial** and not affiliated with Google.
 - **AI service use**: using Gemini AI is governed by **Google's terms** (<https://policies.google.com/terms>, <https://ai.google.dev/gemini-api/terms>), not by the Kit's license.
 - **Commercial-use caution**: the Kit itself may be used commercially, but **whether commercial use of the AI service is allowed, and any fees, are governed by Google's terms and your plan — your responsibility**.
 - **No warranty**: the Kit is provided "AS IS" with no warranty. You use it at your own risk (see `NOTICE`).
